Current Status of Martin Luther King, Jr. Park Splash Pad Amenities

X INOPERABLE SPRAY FEATURE

□ APPROXIMATE CONCRETE SECTION TO BE REMOVED

● STRONGLY RECOMMENDED FOR REPLACEMENT

The activation bollard has not functioned for several years, despite multiple attempts to make repairs. A replacement activation bollard and wiring is necessary to ensure the splash pad only runs when in use. This amenity currently runs nonstop, 8am-8pm, provided the timers are functioning properly.

This aboveground feature is no longer operational due to natural deterioration.

Two of the arches no longer function. The two inoperable arches could be replaced, provided an equivalent could be identified.

This aboveground spray feature collapsed in late fall after the splash pad closed for the season. This was due to the age and natural deterioration of the amenity.

The cannons (water squirters) have not operated consistently the past few years. These no longer project water and instead have a constant drip/stream from the nozzle when functioning.

This aboveground spray feature is in the same condition as the Water Trio that collapsed last Fall. Spot welding sections are possible, but is not a common practice due to safety concerns.

Additionally, the bars between the buckets are meant to have a steady rainfall. This has not functioned in several years.
