

A G E N D A
FORT SMITH PORT AUTHORITY

MEETING
Thursday, April 20, 2023
Port of Fort Smith, 200 Navy Road
Fort Smith, Arkansas

TIME: 11:30 a.m.

1. Call to order – Larry Combs, Chair
2. Roll Call
3. Approve minutes of:
 - a. January 26, 2023 regular meeting
4. Treasurer’s Report – Philip Doss, Treasurer
 - a. Port Authority Bank activity and current balances
 - b. Ratification of payments made to date
5. Operator’s Report/Tonnage Report
6. Business Items for discussion:
 - a. Consider approval of FTN Invoice #69837 for \$1,815 and #69987 for \$4,716.25 for no-rise analysis work (previously approved up to a total of \$8500 plus expenses)
 - b. Review FTN’s Report on Warehouse #4 No Rise Analysis
7. Other business
8. Next regular meeting: Thursday, July 20, 2023
9. Adjourn.

City of Fort Smith
Port Authority Meeting
11:30 a.m. Thursday, January 26, 2023
Port of Fort Smith, 200 Navy Road
Fort Smith, Arkansas

MINUTES

The Fort Smith Port Authority scheduled a regular meeting at 11:30 a.m. on Thursday, January 26, 2023 at the Port of Fort Smith, 200 Navy Road, Fort Smith.

After a box lunch provided by Bank OZK and arranged by Philip Doss, the meeting was called to order by chairman Larry Combs at 11:45 a.m. and a quorum was noted present. Other Port Authority members present were Philip Doss, Dustin Collyge, Eddie Norman and Chad Lane. Others attending included Marty Shell, Cameron Hubbs and Jeff Dingman.

The minutes of the October 27, 2022 regular meeting were presented for approval. Mr. Doss moved approval of the minutes. Mr. Lane seconded, and the motion carried by unanimous vote.

The Port Authority reviewed the Port Authority's bank account statements for Certificates of Deposit funds as of December 24, 2022 and disbursements from operating accounts as of December 30, 2022. As of December 24, the three CD accounts total \$2,008,496.81. Mr. Lane asked if the three laddered CD had fees for breakage, or if the CD's could be redeemed so the funds could be re-invested at higher rates of return. It was noted that interest rates for CD's is currently over 3% and nearly 4%, compared to the 2.11% and 2.41%. Mr. Doss offered to do an analysis on the possibility of cashing out and reinvesting, assuming no fees are required.

The operating account maintained for grant funds stands at \$1.11 and the Port Authority's main operating account as at \$143,920.20 as of December 30, 2022. Mr. Norman moved approval of the Treasurer's Report. Mr. Collyge seconded, and the motion carried unanimously.

Mr. Doss reported that two outstanding invoices have been processed for payment and need to be ratified. The first is a payment Landmark CPA's for production of the FY2021 Financial Statements in the amount of \$1700, the specific amount being authorized at a previous meeting. The second is a payment to Studio 6 Architects in the amount of \$3,760 for pre-development services and evaluation of the Warehouse 4 addition, also authorized at previous meeting. Mr. Doss indicated both payments have been made and the checks have cleared. Mr. Collyge moved ratification of both payments, Mr. Doss seconded and the motion carried by unanimous vote.

Mr. Shell delivered the Operators/Tonnage Report, stating that in the fourth quarter 2022 the Port of Fort Smith saw a total of 15,588.368 net tons of material, mostly scrap iron by barge. The Port of Van Buren handled 44570.742 net tons of material, mostly bulk agricultural materials by barge. Total for the quarter at both facilities was 60,159.110

net tons. It was noted that this was about 36,000 fewer tons than the previous quarter, but overall 2022 saw 291,170 net tons at the two ports compared to 231,956 net tons in 2021 (an increase of 25.5%). Mr. Lane asked what the highest year's tonnage was for comparison, Mr. Shell replied that 2011 saw 370,000 net tons. More recently, before current tariffs went into effect 2017 saw 347,000 net tons, and 2018 went down to 285,000 net tons after government tariffs went into effect. The winter months coming up should see increased activity with bulk material for cattle feed in the first quarter 2023. Feed is seasonal and based on spot sales for space currently available when needed. Currently all warehouses at Port of Fort Smith are full with such material, which should continue through next spring.

Mr. Doss asked if there is typically more rail & truck traffic than barge traffic. Mr. Shell said that while that may be so currently, it fluctuates based on customer needs. The Ports of Van Buren & Fort Smith work together to provide storage off of barges, as it is cheaper than continuing to barge them up river and then having to find storage.

Mr. Norman asked about continuing to receive tonnage reports on the Port of Van Buren, as it isn't in the Port Authority's jurisdiction and no longer has any bearing on rents due by the Operator due to the flat fee monthly rent in the current Operator Agreement. Mr. Shell said while that is true, he likes providing it for continued transparency, plus he regularly works the two facilities together to provide maximum benefit to the customers that use the facilities. He tracks the information anyway, so it is no additional burden to provide it to the Port Authority as has historically been done. Mr. Doss moved approval of the Operators/Tonnage report. Mr. Norman seconded and the motion carried by unanimous vote.

The Port Authority reviewed the FY2021 Financial Statements, presented as final. There were no questions. The Port Authority then considered the Engagement Letter submitted by Landmark CPA's for the preparation of the FY2022 Financial Statements for the City of Fort Smith Port Authority. Mr. Lane clarified that the proposed fee for such service remains at \$1,700. Mr. Lane moved approval of the Engagement Letter with Landmark CPA's. Mr. Collyge seconded and the motion carried by unanimous vote.

Mr. Combs asked Mr. Shell to discuss the preliminary site plan and other matters pertaining to Warehouse 4. The preliminary plan submitted by Studio 6 shows a somewhat smaller Warehouse 4 (230 ft building) compared to the other three warehouses (250 foot buildings), due to the proximity of the building to the floodway and regulations that prevent encroachment of that area. FTN Associates, Ltd. Engineers has submitted a proposal to perform a No-Rise Analysis for the Proposed Warehouse (No. 4) at the Port of Fort Smith. The basic fee proposed for such services is \$8,500, plus reimbursable expenses. Such work is required for the construction of a 250-foot Warehouse No. 4, and will be useful to have on hand to verify that all of the work done at the Port of Fort Smith doesn't negatively impact the flood tendencies of the surrounding river or creek. Mr. Shell also noted that the city's Engineering Department has included \$3 million in its 2023 Capital Improvement Program to improve/enhance the tail end of Mill Creek that encircles the Port property, and having this No-Rise Analysis done ahead of that project will be helpful to both the Port and the City. Mr. Collyge moved approval of the FTN proposal for No-Rise Analysis. Mr. Doss seconded and the motion carried unanimously.

In other discussion items, Mr. Shell, supported by Mr. Hubbs, pointed out that the concrete needed for the fourth warehouse at today's prices will cost about \$20,000 more than the project to build Warehouse C. He noted that he is building the concrete bases of buildings at the Port of Van Buren, even though he needs to wait until the price of the building structures that go on top of them to come down. He suggested the Port Authority perhaps consider the same, and build out all of the fourth warehouse base and defer installation of building superstructure until prices of those come down. Mr. Collyge inquired about just building the concrete pads for outside storage, and not planning to enclose them in the future. Mr. Shell said that outside storage is useful and would definitely be used, but it there is a need and a higher priced market for indoor storage. Mr. Dingman asked if the warehouse base is built, when is the requirement for an additional fire hydrant triggered, to which Mr. Hubbs replied that it wouldn't be required until the building is enclosed. Mr. Norman pointed out that the Port Authority's funds are to be used for Port expansion and improvement, not as a savings account. The funds will be used, but he isn't in a hurry to make a decision on it. It may be worth seeing the impact of the no-rise analysis, the city's Mill Creek project, and it may be worth evaluating access across the creek to make that property more usable, all while undertaking the needed planning for the fourth building. Mr. Doss expressed similar comments, and all seemed to be in consensus.

The next regular meeting of the Fort Smith Port Authority is scheduled for Thursday, April 27, 2023. There being no further business, the meeting adjourned at 12:50 pm.

Respectfully submitted,

Jeff Dingman
Deputy City Administrator
City of Fort Smith, Arkansas

**FORT SMITH PORT AUTHORITY
PORT OF FORT SMITH WAREHOUSE #4
NO-RISE ANALYSIS
MILL CREEK
FORT SMITH, AR**

During the February 2023 billing period, the following activities were performed for this Project:

1. Project Coordination:
 - Performed general project coordination (e.g., coordination on proposed bridge information, etc.).
 - Received preliminary development plan from Mr. Marty Shell on November 14, 2022.
 - Received signed contract to proceed with analysis on January 26, 2023.
2. No Rise Analysis:
 - Obtained effective Letter of Map Revision (LOMR) modeling for Mill Creek from the Flood Risk Study Engineering Library (FRiSEL).
 - Gathered available topographic data (e.g., LiDAR data) for the project area for use in development of the hydraulic modeling.
 - Received preliminary warehouse information on November 14, 2022.
 - Started development of hydraulic modeling for the No Rise Analysis to examine the impacts of the proposed development.

During the March 2023 billing period, the following activities are anticipated:

1. Complete development of hydraulic modeling.
2. Start and complete No Rise Analysis and provide summary of findings to the Client.

NO-RISE CERTIFICATION & DOCUMENTATION

ENGINEERING "NO-RISE" CERTIFICATE

For Arkansas NFIP Communities

OFFICE USE ONLY

Date Received: _____
File Number: _____

INSTRUCTIONS FOR THE ENGINEER

Section 60.3 (d) (3) of the National Flood Insurance Program (NFIP) regulations states that a community shall "prohibit encroachments, including fill, new construction, substantial improvements and other development within the adopted regulatory floodway **unless it has been demonstrated through hydrologic and hydraulic analyses performed in accordance with standard engineering practice** that the proposed encroachment would not result in any increase in flood levels within the community during the occurrence of the base (100-year) flood discharge." This certification -an Engineering "No-Rise" Certificate - must be obtained from the applicant and be signed and sealed by a professional engineer.

The engineering "no-rise" certification must be supported by technical data based upon hydraulic analyses that utilize the same model used to prepare the effective Flood Insurance Study (FIS) report and Flood Insurance Rate Map (FIRM) unless it is demonstrated that the effective hydraulic model is unavailable or its use is inappropriate.

The "no-rise" supporting data should include the following:

- Copy of the Duplicate Effective model;
- Copy of the Corrected Effective model;
- Existing conditions, or Pre-Project conditions model
- Proposed conditions or Post-Project conditions model.
- FIRM and topographic map, showing floodplain and floodway, the additional cross-sections, the site location with the proposed topographic modification superimposed onto the maps, and a copy of the effective FIRM or FBFM showing the current regulatory floodway.
- Analysis procedures noting modifications made to original FIS model to represent revised existing conditions, as well as those made to the revised existing conditions model to represent proposed conditions.
- Copy of effective Floodway Data Table copied from the (FIS) report.
- Statement defining source of additional cross-section topographic data and supporting information.
- Cross-section plots, of the added cross sections, for revised existing and proposed conditions.
- Certified planimetric (boundary survey) information indicating the location of structures on the property.
- Copy of the source from which input for original FIS model was taken.
- CD or flash drive with all input and output files.
- Printout of output files from EDIT runs for all three floodway models.

The engineering "no-rise" certification and-supporting technical data must stipulate **NO impact on the 100-year flood or floodway elevations at the new cross-sections and at all existing cross-sections anywhere in the model.** Therefore, the revised computer model should be run for a sufficient distance (usually one mile, depending on hydraulic slope of the stream) upstream and downstream of the development site to insure proper "no-rise" certification.

Failure to follow this guidance may result in notification to the Arkansas State Board of Licensure for Professional Engineers, the Arkansas Floodplain Managers Association Professional Development and Certification Committee, and/or FEMA Region VI.

If you have any questions regarding the Engineering "no-Rise" Certificate or need additional information, please contact the State National Flood Insurance Coordinator at 501-682-3969.

Construction of a new warehouse at the Ft. Smith Port
(Warehouse #4)

Principal Use of Premises:
Industrial Property

FLOOD INSURANCE RATE MAP (FIRM) INFORMATION

NFIP map(s) and panel(s) affected: 05131C0110K

Effective date of map: 03/02/2012

Base Flood Elevation on FIRM: 420.5ft (NAVD88) - Effective Lettered Cross Section A

Name of flooding source: Mill Creek

SUPPORT DOCUMENTS

Attached are the following documents that support this Engineering "No-Rise" Certification:

- Copies of the Duplicate Effective, Corrected Effective, Existing or Pre-Project conditions, and Proposed or Post-Project conditions models
- Analysis procedures documentation
- Copy of effective Floodway Data Table
- Cross-section plots
- CD or flash drive with all input and output files.
- Printout of output files runs for all three floodway models.

Please see **INSTRUCTIONS FOR THE ENGINEER** for additional documentation that may be required.

CERTIFICATION

This is to certify that I am a duly qualified Professional Engineer licensed to practice in the State of Arkansas. I further certify that the attached engineering data supports the fact the proposed development would not result in any increase in flood levels within the community during the occurrence of a base flood event.

LIST OF FIGURES

ATTACHMENT 1:	Figure 1 – Project Location Map
	Figure 2 – FEMA Annotated FIRM Map

1.0 DATA GATHERING/REVIEW

1.1 Project Scope and Location

FTN Associates, Ltd. (FTN), on behalf of Fort Smith Port Authority (Client), performed a hydraulic analysis in support of a No-Rise Certification for a proposed future warehouse (Warehouse No. 4) along the right descending bank of Mill Creek in Fort Smith, Arkansas (the Project). The proposed project consists of constructing a warehouse (Warehouse No. 4) on the Port of Fort Smith / Five Rivers Distribution property. Figure 1 provides the location of the proposed Project.

1.2 Available Hydraulic Model Information

FTN obtained proposed project information from the Client and the effective hydraulic model for Mill Creek from the Federal Emergency Management Agency (FEMA). From available information, the effective hydraulic model was converted to a HEC-RAS model for a Letter of Map Revision (LOMR) in 2005. The hydraulic model included both the multiple flood and floodway scenarios. All hydraulic modeling and edits used to represent the proposed development are built upon the effective hydraulic model received.

The proposed development information consists of a proposed warehouse design, which was provided to FTN on November 4, 2022, by the Client.

1.3 Topographic Information

Since the completion of the Mill Creek Effective Model, updated high-resolution LiDAR data has been flown for the Project area as part of the 2017 North Corridor FEMA R6 LiDAR and 2017 Ouachita FEMA R6 LiDAR projects. This LiDAR information was collected by FEMA and the USGS as part of topographic collection effort and is guaranteed to be a Quality Level 2. Since this data is newer and contains more detailed data in and around the Project area, it has been used to perform any updates to floodplain overbank information. As no new survey data was collected as part of this Project, information for the channel was extracted from the Effective Model for all newly added cross section locations.

Figure 2, Annotated FIRM, shows the final development location on top of the effective FEMA Flood Insurance Rate Map (FIRM) information for both Sebastian County, Arkansas, and Incorporated Areas, FIRM 05131C0110F dated March 2, 2012, and LeFlore County, Oklahoma, and Incorporated Areas, FIRM 40079C0125C dated August 16, 2012.

2.0 HYDROLOGY

No new hydrologic analysis was performed for this Project. FTN used the discharges in the Effective Model (floodway and 4-flood runs) for Mill Creek. The discharges used are shown in Table 1.

Table 1. Mill Creek Discharges.

River Station	Discharge (cfs)

3.0 HYDRAULIC EVALUATION

3.1 Model Development

The models used in this hydraulic evaluation are described in the following sections. Cross section locations and floodway encroachment stations were taken from the effective model data.

3.2 Effective Model

As mentioned in Section 1.2, the effective model was provided to FTN from the FEMA Mapping Information Platform (MIP) in HEC-RAS model format. The model results were compared to the FIS report to confirm that the model available reflected information from the FIS.

3.3 Duplicate Effective Model

The Effective Model from Section 3.2 was originally developed using HEC-RAS (Version 3.1.2). For the Duplicate Effective Model (DEM), FTN converted the effective model data into the HEC-RAS (Version 6.1) hydraulic modeling software. As a result of this conversion, small differences (± 0.01 feet) were noted throughout the model. These differences are due to the change in software version only, as no further model changes were made.

3.4 Corrected Effective Model

Using the DEM as a starting point, FTN made additional improvements to the model, which then became the Corrected Effective Model (CEM). As part of this No-Rise analysis, the CEM was georeferenced, using the Effective FIRM data. Four (4) additional cross sections were added to better define the proposed development and Project area. These additional cross sections were located at river stations (RS) 0.018, 0.0408, 0.0609, and 0.1595. Additional changes made during development of the model are summarized below:

- Topographic data was updated for RS 0.077 due to its relation to the Project area.

- Manning’s “n” values were established for RS 0.018, 0.0408, 0.0609, 0.077, and 0.1595 based on a review of aerial imagery (e.g., Bing and Google imagery) and engineering judgment. A summary of the Manning’s “n” values is shown below:
 - Channel
 - 0.035: Channel with light brush cover in the overbanks
 - Overbanks
 - 0.10: Forested Areas
 - 0.05: Grassland/Herbaceous, Developed Low Intensity
 - 0.03: Gravel surfaces
 - 0.011: Paved surfaces (such as roadways).

With the addition of new cross sections, FTN determined new floodway encroachment stations for the added cross sections by intersecting the effective floodway with the cross sections using GIS toolsets. As the Project location is located along the county boundary, information from the Floodway Data Table was used to extrapolate the boundary in Leflore County, OK, as the current effective information is an approximate (Zone A) Special Flood Hazard Area (SFHA).

3.5 Existing Conditions Model

For the purposes of this Project, there is no difference between the CEM and the Existing Conditions Model (ECM). Therefore, an ECM has not been provided.

3.6 Post-Project (No-Rise) Model

The Post-Project Model (PPM) was developed by using the CEM and updating cross section geometry with obstructions to represent the proposed development. The application of a blocked obstruction is considered conservative as it removes the proposed building footprint from model calculations.

The proposed development information consists of a proposed warehouse design located on an existing pad. The location of the warehouse was provided to FTN by the Client on November 4, 2022.

3.7 Hydraulic Analyses

Hydraulic analyses were performed by FTN for the scenario described above using HEC-RAS Version 6.1. The results of the hydraulic analysis for the Corrected Effective Model (CEM) were compared to the results of the Post-Project Conditions Model (PPM) to evaluate for potential rises in the unencroached and floodway water surface elevations produced by the base flood (1% annual-chance event). The following comparison tables (Tables 2 and 3) provide a comparison of the unencroached and floodway water surface elevations. The Project area cross sections are highlighted in yellow. Table 4 shows the tie-in comparison for the multiple floods and floodway runs.

Table 2. Unencroached 1%-Annual-Chance Water Surface Elevation Comparison.

4.0 EVALUATION SUMMARY

This hydraulic evaluation has determined that the new warehouse, if constructed as proposed, will achieve a No-Rise condition in the unencroached and floodway water surface elevations of Mill Creek under base flood conditions. This analysis was performed under the condition that the areas of overbank alteration are limited to the information provided for this analysis and that the main channel and modeled structure crossings remain free and unobstructed of debris. Therefore, while this analysis was developed using applicable and, in our engineering judgment, conservative methods, this does not guarantee that flooding will not occur as larger and more intense flood events are possible that are above and beyond the design events and scenarios used.
